

for Swimming Pools

Can't find a flexible joint sealant that handles chlorinated water?

Want versatile adhesives to fix, patch and seal underwater?

How about products that can actually stick to tricky surfaces like PVC and rubber?

WHY SCUBAPOXY?

-  Genuine underwater-applied products mean repairs can be performed without draining.
-  Good overall chemical resistance, including chlorinated water.
-  Resin-rich formulations give superior adhesion compared to traditional "putty" products. Sticks to all common materials, above and below water - concrete, metal, fibreglass, PVC, rubber etc.
-  High-build, anti-sag adhesives and sealants ideal for sealing and gap-filling, even on vertical surfaces.
-  Proven track record of performance in swimming pools for over 10 years.

Ph: 1300 EPOXIES www.RealWorldEpoxies.com

Scubapoxy 3115 has been used by horse trainers to repair the rubber lining in their wading pools. In one instance, a leading trainer made contact during the Spring Carnival desperately trying to get their pool fixed so his million-dollar animals could recuperate before the next big race.
