

for Tank Repairs

Do you come across leaking tanks but can't drain to make repairs?

Is there potable water or any sensitive marine life involved?

Have other coatings failed to last underwater?

WHY SCUBAPOXY?

- Genuine underwater-applied products mean repairs can be performed without draining.
- Potable water tested options available.
- Resin-rich formulations give superior adhesion compared to traditional "putty" products. Sticks to all common construction materials, above and below water - concrete, metal, fibreglass, PVC etc.
- High-build protection with excellent sag resistance for application onto vertical surfaces up to 2mm.
- Fibre reinforcement for improved film strength and coverage on edges (better corrosion control).
- Proven track record of performance in tanks for over 10 years.

“ We have tried several potable-approved materials for in-water repairs and we can recommend Scubapoxy as superior products due to their strong initial adhesion and ease of application. ”

David Barry, Managing Director, Aqualift Pty. Ltd.
